Professional Profile

Early-career engineering professional with formal training in data analysis and practical experience analyzing real-world datasets to identify patterns, develop metrics and generate actionable insights. Skilled in Python, SQL and data visualization, with additional experience working with technical monitoring systems and structured project data. Interested in data preparation, quality analysis, reporting and translating complex datasets into clear information that supports decision-making.

Skills

Data Analysis: Data cleaning, exploratory analysis, data interpretation, statistical comparisons, trend analysis

Tools: Python, SQL, Power BI, Excel , Django

Data & Monitoring : Node-RED, MQTT, MODBUS TCP

Experience

MAY 2026 - AUGUST 2026

Maji Ndogo Water Access Analysis, ALX - *Junior Analyst*

- Analyzed water-access data to assess the availability and accessibility of water resources across provinces in Maji Ndogo.
- Derived metrics including the **number of people served by different types of water sources** and the **number of available water sources per province** to identify disparities in access.
- Compared water-access patterns with **provincial crime levels and the frequency of access to water points** to investigate how security conditions could affect residents' ability to access water.
- Examined the relationship between access to water points and reported assaults, highlighting how repeated journeys to water sources could expose residents to security risks.
- Translated the analysis into insights that could support understanding of water-access challenges and inform decisions on where water infrastructure and interventions may be most needed.

DEC 2025 - SEP 2026

E-Commerce Customer and Purchasing Behaviour Analysis

- Analyzed e-commerce purchasing data across customers aged **18–72** to identify differences in purchasing behaviour and spending patterns between age groups.

- Examined purchasing dynamics across **weekly and monthly time periods** to identify temporal trends and variations in customer activity.
- Investigated possible demographic and life-stage factors that could explain observed differences in purchasing behaviour, treating these as hypotheses for further analysis rather than established causes.
- Compared average spending across age groups, performing testing across different age group sizes, and through use of unemployed-early career-mid career- late career and retirement age groups, identified **customers aged 53–59 as the highest average spenders**, followed by the 46–52 and 25–31 age groups, while the 32–45 groups showed comparatively moderate spending levels.
- Translated the analysis into customer-segmentation and purchasing-pattern insights that could support **targeted marketing, customer profiling and business decision-making**.

DEC 2024 - PRESENT

Web Development- *Python, Django framework*

- Development of ecommerce, healthcare and industrial systems websites. Check github repo/links in the section below for samples.

Education

Data Analysis Certificate, Professional Foundations Certificate – ALX (2025)

B.Eng. Electrical & Electronic Engineering – Technical University of Kenya (2021–Nov. 2026)

Leadership and Projects

Maji-Ndogo Project: Delivered sustainability insights via data analysis as mentioned in Experience section.

Swiftdocx- an online application website, demonstrating form-based data collection, validation, database storage and retrieval.

Link- https://uno1-ahbjvga0u-agolaeugene0-2297s-projects.vercel.app/ or https://github.com/owino62/uno on github.

Nitibu Healthcare Website- healthcare website complete with a patient appointment booking, blog on various illnesses as well as sale of medications, implementing payment APIs

Link- https://github.com/owino62/nitibu

Elongo Shop Website- ecommerce website for sale of supermarket goods.

Link- **https://github.com/owino62/elongo**

SHAMSI Water Project:

- Leading a water-access initiative involving the development of a solar-powered water system for a school community. Integrated sensors with an ESP32 and implemented MQTT communication for transmitting monitoring data to a Node-RED dashboard.

IEEE Student Branch: IAS Secretary, coordinated workshops & projects.
